

## IMMUNOCAP® SPECIFIC IGE BLOOD TEST

ChildLab is pleased to offer a new tool that will aid in your management and diagnosis of Allergic Disorders. The ImmunoCAP® Specific IgE blood test is an in vitro quantitative test that measures allergen-specific IgE in human serum. It's diagnostic use is intended to aid in the clinical diagnosis of IgE mediated allergic disorders in conjunction with other clinical findings. Listed below are 50 individually orderable allergens and profiles that are available from ChildLab:

### ORDERABLE ALLERGENS

#### Environmental Allergens

- |              |                  |                      |
